SRM TRP Engineering College

(An AUTONOMOUS Institution)

Tiruchirappalli

Higher Order Assessment Instructions with Rubrics

Department	Computer Science and Engineering				
Programme:	B.E.	**Semester:**	I	**AY:**	2026 – 2027 [ODD]
Faculty Handling:	Mr. A. Sendhooran, AP/CSE				
Course Code & Title:	2611CSSJ102 & Web Essentials				
Assessment Task:	Mini Project (Project Based Learning)	**Assessment Type:**	Term Work / Individual	**Required Hrs:**	2 Weeks
Assessment Question based on:	Open Ended (Yes) | Project Based Learning (Yes) | Creative Thinking (Yes) | Critical Thinking (Yes)			**Level of Thinking (RBT):**	K3/K6
SDG to be Addressed:	SDG is Required: Yes	**SDG Number:**	SDG 4 / 9	**Target Number:**	4.4 / 9.c
SDG Integration Level:	Level 2: Design Alignment (Yes)				
RIASEC Context	Realistic (Yes) | Investigative (Yes) | Artistic (Yes)				
Presentation Format:	Live Demonstration (localhost) / PDF Report / GitHub Repository				
Max Marks:	40 Marks				
Relevant Course Outcome(s):	CO1, CO2				
Submission Deadline:	09/10/2026				
Student Name & Register No.	AKASH M – TRP2026CS014 (I CSE A)				
Allocated Website	PHOTOGRAPHY AND SHORT FILM FESTIVALS				

1. Topic and Aim

Item	Details
Course	2611CSSJ102 – Web Essentials (Units 1 and 2)
Topic	PHOTOGRAPHY AND SHORT FILM FESTIVALS
Student	AKASH M, TRP2026CS014, I CSE A
Aim	To plan, build and test a multi-page HTML5 website for a college photography and short film festival that gives visitors information about the festival and lets them register to take part, and to run it through a local Web server.

Objectives

- Create six connected pages (Home, About, Schedule, Register, Contact and Unit 1 Evidence) with valid, semantic HTML5.
- Use tables, lists, an accessible form with HTML5 input types, images, and video with captions.
- Serve the site on localhost and verify it with browser Developer Tools and the W3C validator.
- Explain the browser–DNS–server process, URL structure, hosting choice and security precautions.

2. Components Used

2.1 Hardware and Software

Component	Specification / Purpose
Computer	hp laptop, 4 GB RAM, Windows
Code editor	Visual Studio Code – writing HTML
Web browser	Google Chrome – viewing pages and Developer Tools (Elements, Network, Console)
Local Web server	Python http.server on port 8000 (Apache in XAMPP can also be used)
Validator	W3C Nu HTML Checker – checks the HTML structure
Version control	GitHub repository – submission of source code

2.2 HTML5 Components

Area	Elements / attributes used	Where used
Document structure	<!DOCTYPE html>, html lang, head, meta charset, meta viewport, title, link	All pages
Semantic layout	header, nav, main, section, article, aside, footer, figure, figcaption, address, time	All pages
Text	h1–h4, p, strong, em, mark, small, sup, sub, q, blockquote, pre, code, var	about.html, index.html
Lists	ul, ol, dl / dt / dd	index.html, about.html
Tables	table, caption, colgroup, thead, tbody, tr, th (scope col / row / colgroup / rowgroup), td, rowspan, colspan	schedule.html, contact.html
Forms	form (action, method="post"), fieldset, legend, label, input, select, option, textarea, button	register.html
Input types	text, email, tel, date, number, radio, checkbox, file	register.html
Validation	required, minlength, maxlength, pattern, min, max, accept	register.html
Media	img with alt, video with controls, two source formats, track (captions), poster	index.html, about.html
Accessibility	aria-current="page", aria-label, aria-describedby, lang="en"	All pages

2.3 Project Folder

File / Folder	Contents
index.html	Home: introduction, highlights, call to action, festival teaser video
about.html	History, mission, venues and facilities, contact summary
schedule.html	Accessible festival schedule table with rowspan and colspan
register.html	Festival registration form
contact.html	Address, email, telephone, download link, office hours
evidence.html	Unit 1 evidence: request–response, URL analysis, hosting, security
style.css	Basic readability styles
images/, media/, documents/	Banner and auditorium photos, teaser video (WebM, MP4) with captions, festival brochure PDF
README.txt	Project details and steps to run

2.4 Procedure

1. Prepared the requirement analysis and a site map of the six pages.
2. Created the festival-site folder with images, media, documents and screenshots sub-folders.

3. Wrote each page in VS Code using the same header, navigation and footer.
4. Started the local server with "python -m http.server 8000" and opened http://localhost:8000.
5. Checked every page with Developer Tools and the W3C validator, recorded tests T01–T12 and fixed the defects found.
6. Uploaded the project folder to GitHub and submitted the repository link.

3. Program

The complete source code of the six pages and the stylesheet is given below. Pages 2 to 6 use the same header, navigation (with aria-current on their own link) and footer as index.html; only the <title> and the content inside <main> change.

index.html

```

<section id="environment">
<h3>Development Environment</h3>
<p>Editor: Visual Studio Code. Browser: Google Chrome. Local server: Python <code>http.server</code> (XAMPP
  Apache works the same way).</p>
<pre><code>cd photo-film-site
python -m http.server 8000
# open http://localhost:8000/index.html</code></pre>
<p>After each change, I saved the file and refreshed the browser (Ctrl + R). The localhost screenshot is in the
  report.</p>
</section>
<section id="hosting">
<h3>Hosting Recommendation</h3>
<p>I recommend <strong>shared hosting</strong>. The site is small and static, traffic is a few hundred visits a
  day, and shared hosting is the cheapest option with the least administration. A VPS or dedicated server gives
  more control and scalability, but the festival does not need it yet.</p>
<p>The <strong>domain name</strong> gives a readable address, <strong>DNS records</strong> (A record) point the
  name to the server's IP address, the <strong>hosting server</strong> stores and serves the files, and the
  <strong>control panel</strong> manages files, SSL certificates and email.</p>
</section>
<section id="security">
<h3>Security Considerations</h3>
<ul>
```

```
<li>Use HTTPS so form data is encrypted in transit.</li>
<li>No passwords or secrets are placed in HTML comments or hidden inputs.</li>
<li>Browser validation (required, pattern, min/max) helps users, but the server must validate again.</li>
<li>Future database code must use parameterised queries to prevent SQL injection.</li>
<li>Uploaded photos and posters must be checked for type and size and stored outside the web root.</li>
<li>Any user input shown back on a page must be escaped to prevent XSS.</li>
<li>The form collects only the data needed for registration.</li>
<li>The hosting account uses a strong password and two-factor authentication.</li>
</ul>
</section>
<section id="sources">
<h3>Sources</h3>
<ul>
<li>Banner, auditorium photo and teaser video: free-licence files from Pexels / Pixabay (add the author and page
   link for each file you use).</li>
<li>Request&ndash;response diagram: created by the student for this project.</li>
<li><a href="https://developer.mozilla.org/en-US/docs/Web/HTML">MDN Web Docs: HTML reference</a></li>

Capture the moment. Tell the story.

Figure 1: Where still photographs meet moving stories.

The Photography and Short Film Festival brings students and film lovers together to **exhibit, screen and celebrate** visual storytelling. The festival combines a photo exhibition, short film screenings and *hands-on workshops* led by working artists.

Highlights

- Two-day festival open to all departments
- Photo exhibition with more than 100 entries
- Short film screenings of up to 10 minutes each

- Workshops, a photo walk and an awards ceremony

Explore the festival

1. Read about our history, mission and venues
2. View the festival schedule table
3. Find our address and office hours

Register for the festival to submit an entry or attend.

Festival teaser

The video has English captions. A text transcript is also available.

About

Our History

The festival started in November 2023 with 25 photographs and 6 short films. Today it supports **150 entries** and a volunteer team of 30 students.

> A good picture holds a second; a good film holds a lifetime.
>
> — Festival Convener, during the first festival.

Mission and Objectives

- Teach the basics of composition, such as the rule of thirds and exposure: $EV = \log_2(N^2/t)$.
- Train students to plan, shoot, edit and present short films.
- Promote original and responsible visual storytelling.

As our participants often say, “every frame should earn its place”.

Venues and Facilities

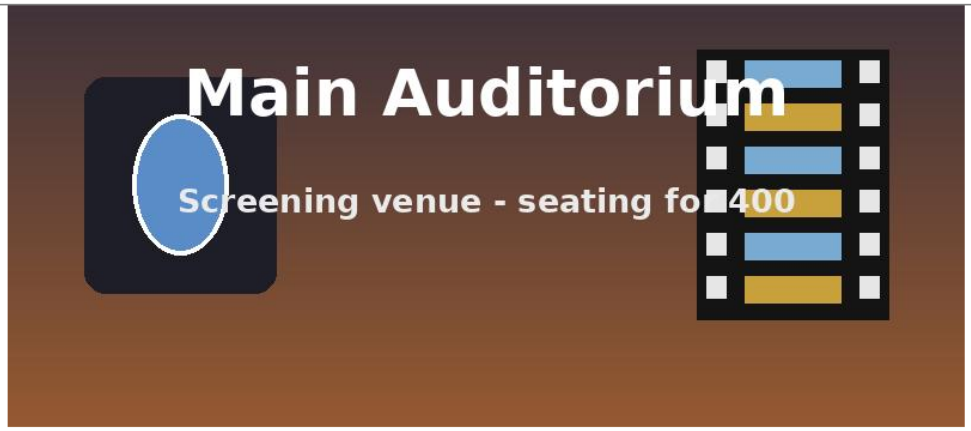

Figure 2: The main auditorium used for screenings.

Main Auditorium
: Projector, surround sound and seating for 400 people.

Exhibition Hall
: Wall panels and lighting for displaying framed photographs.

Editing Lab
: Computers with free editing software for the workshop.

Sample command shown in our editing workshop

```
ffmpeg -i teaser.mp4 -vf scale=640:360 teaser-small.mp4
```

Unit 1 Evidence

What happens when a user opens this website

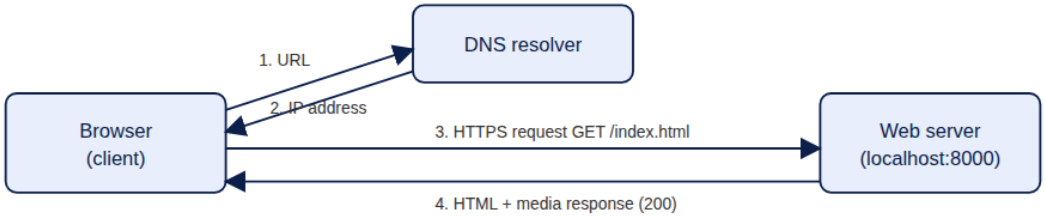

Figure 3: Request–response process for this website.

1. The user types the **URL** into the **browser** (the client) and presses Enter.
2. The browser asks a **DNS** resolver for the **IP address** of `festival.example.edu`.
3. Using that IP address, the browser sends an **HTTPS request** (GET /index.html) to the **Web server**.
4. The server finds the file and sends a **response**: status code 200 and the HTML document.
5. While reading the HTML, the browser sends further requests for images and video.
6. The browser **renders** the page from the HTML and media files, using its default styles.

URL Analysis

Example URL: `https://festival.example.edu:443/index.html?day=1#schedule`

Table 3: Parts of the example URL

Part	Value	Meaning
Scheme	https	Secure HTTP protocol
Domain name	festival.example.edu	Name resolved to an IP address by DNS
Port	443	Default HTTPS port (optional)
Path	/index.html	File requested on the server
Query	?day=1	Extra data sent to the server
Fragment	#schedule	Section of the page to scroll to

Relative paths and fragments

- `images/auditorium.jpg`: the browser joins it with the current folder, giving `http://localhost:8000/images/auditorium.jpg`.
- `#office-hours`: stays on this page and scrolls to the element with `id="office-hours"`.

Development Environment

Editor: Visual Studio Code. Browser: Google Chrome. Local server: Python `http.server` (XAMPP Apache works the same way).

```
cd photo-film-site
python -m http.server 8000
# open http://localhost:8000/index.html
```

After each change, I saved the file and refreshed the browser (Ctrl + R). The localhost screenshot is in the report.

Hosting Recommendation

I recommend **shared hosting**. The site is small and static, traffic is a few hundred visits a day, and shared hosting is the cheapest option with the least administration. A VPS or dedicated server gives more control and scalability, but the festival does not need it yet.

The **domain name** gives a readable address, **DNS records** (A record) point the name to the server's IP address, the **hosting server** stores and serves the files, and the **control panel** manages files, SSL certificates and email.

Security Considerations

- Use HTTPS so form data is encrypted in transit.
- No passwords or secrets are placed in HTML comments or hidden inputs.
- Browser validation (required, pattern, min/max) helps users, but the server must validate again.
- Future database code must use parameterised queries to prevent SQL injection.
- Uploaded photos and posters must be checked for type and size and stored outside the web root.
- Any user input shown back on a page must be escaped to prevent XSS.
- The form collects only the data needed for registration.
- The hosting account uses a strong password and two-factor authentication.

Sources

- Banner, auditorium photo and teaser video: free-licence files from Pexels / Pixabay (add the author and page link for each file you use).
- Request–response diagram: created by the student for this project.
- MDN Web Docs: HTML reference

Photography and Short Film Festival Website

5. Testing Record

Test ID	Test	Expected result	Actual result	Status
T01	Open index.html through localhost	Home page loads with status 200	Returned 200; page displayed	Pass
T02	Use navigation from every page	Every destination opens correctly	36 links checked, all 200; current page marked with aria-current	Pass
T03	Activate fragment link	Browser moves to matching id	URL became contact.html#office-hours; section scrolled into view	Pass
T04	Load images and media	No missing-file errors	Festival teaser video did not play in one browser (MP4 only). Fixed by adding a WebM source and poster.	Fixed – Pass
T05	Navigate by keyboard	Logical focus order	Nav links → name → email → phone → date → entries → type → interests → session → description → file → Submit	Pass
T06	Submit empty form	Required-field feedback appears	"Please fill out this field." shown on Full name	Pass
T07	Enter invalid email / number	Browser reports invalid value	Email without @, entries = 9 and phone 12345 rejected	Pass
T08	Inspect labels	Every control has a label	13 controls, each with one label and a name	Pass
T09	Inspect table headings	Relationships are clear	Caption, column and row headings with scope; rowspan and colspan correct	Pass
T10	Validate HTML	No structural errors	W3C Nu HTML Checker: 0 errors, 0 warnings on all six pages	Pass
T11	Inspect Network panel	No 404 responses	All responses 200, 206 or 304	Pass
T12	Resize browser window	Content remains readable	Schedule table overflowed at 375 px. Fixed with a scrollable wrapper and smaller cell padding.	Fixed – Pass

6. Result

The multi-page HTML5 website for the Photography and Short Film Festival was planned, created and tested successfully. All six compulsory pages were served through the local Web server at http://localhost:8000, the navigation, table, registration form and media worked as expected, and the W3C validator reported no errors. All twelve tests passed after the two defects found during testing were corrected. Hence the aim of the assignment was achieved, and the output was verified.
